Integration with Mobiles

Most business phone users have two types of phones - a fixed desk phone and a mobile.

Both types of phones have advantages over the other, but until recently, combining the two into a single system has been difficult.

But Fixed-Mobile Convergence is now a reality, offering free-of-charge calls between office phones and mobiles

- extension dialling to the mobiles (no need to redial the 07xxx mobile number)
- transfer and/or conference calls between mobile and office phones (with FOC calls)
- one number - no need now to put mobile numbers on business cards
